Projects & contributions

Projects describe my technical contribution, not ownership of brands. This document does not verify their current operational status. My mobile-app role covers backend, APIs and integration.

SMSM Market

02/2025–Present

Development and maintenance of SMSM, including APIs, admin tools and mobile-app integration.

Role: Full-Stack Web Developer — Tharawat, Easy Way division, since February 2025.

- Develop product, vendor, order and promotion services, with delivery and payment integrations.
- Review queries, caching and logs to diagnose issues and improve performance.
- Contribute to image processing and WebP delivery with original-image fallback.
- Work on competitor data, matching and analytics for smart-pricing workflows.
- Develop product-assistant workflows, JSON validation and data integration checks.
- Manage hosting, backups and change preparation with separate TEST and production environments.

Laravel · REST APIs · MySQL / Redis · Linux

Project link

Work includes ongoing development; feature availability depends on its delivery stage and acceptance checks.

Moka Sweets

2020

Backend services for products, orders and delivery, connected to a mobile app and an admin dashboard.

Role: Laravel backend and REST API development for integration with Flutter apps.

- Develop product and order management services.
- Provide the data endpoints required by mobile apps.
- Support dashboard functions and delivery workflows.
